General Description

The XL9027 is a 120KHz fixed frequency PWM synchronous buck DC/DC converter, capable of driving a 4A load with high efficiency, low ripple and excellent line and load regulation. XL9027 supports wide input operating voltage range of 5V ~ 45V and a maximum duty cycle of 100% output. Output supports constant voltage loop and constant current loop. A built-in loop compensation module reduces components in the system, lowering power system cost and reducing printed circuit board space.

The XL9027 has built-in thermal shutdown, current limit protection and output short protection function and so on. When the output short protection function happens, the operation frequency will be reduced about from 120KHz to 30KHz.

Applications

- Automotive Electronics
- Industrial Control
- Networking Equipment
- Internet of Things

Pin Configurations

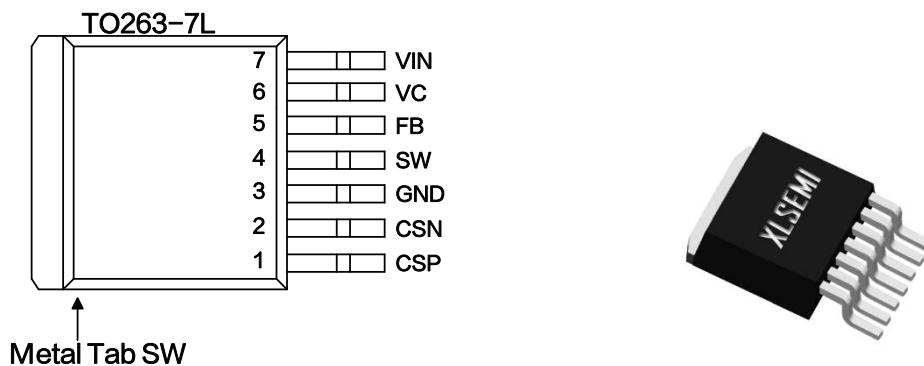

Figure2. Pin Configuration of XL9027

Table 1 Pin Description

Pin Number	Pin Name	Description
1	CSP	Current detection positive terminal pin.
2	CSN	Current detection negative terminal pin.
3	GND	Ground Pin.
4	SW	Power Switch Output Pin (SW). Output is the switch node that supplies power to the output.
5	FB	Feedback Pin (FB). Through an external resistor divider network, Feedback senses the output voltage and regulates it. The feedback threshold voltage is 1.25V.
6	VC	Internal Voltage Regulator Bypass Capacity. In typical system application, The VC pin connect a 1uF capacitor to VIN.
7	VIN	Supply Voltage Input Pin. XL9027 operates from 5V to 45V DC voltage. Bypass Vin to GND with a suitably large capacitor to eliminate noise on the input.
