

Features

- Operation Voltage: 5V~45V
- 0.23V Constant Current Sense Voltage
- Directly drive 1~10 Series LED
- Current Sense Voltage Accuracy $\pm 3\%$
- Fixed 200KHz Switching Frequency
- 3A Constant Output Current Capability
- Internal Optimize Power MOSFET
- High efficiency up to 93%
- Max. Output power up to 15W
- Excellent line and load regulation
- EN PIN TTL ON/OFF capability
- Built in thermal shutdown function
- Built in current limit protection function
- Temperature Grade 1: -40°C to 125°C
Ambient Operating Temperature Range
- Device HBM ESD Classification Level
Class3A
- Available in SOP8-EP package

General Description

The XL9508 is a 200KHz fixed frequency PWM synchronous buck LED constant current driver, capable of driving a 3A load with high efficiency, low ripple and excellent line and load regulation. XL9508 supports wide input operating voltage range of 5V ~ 45V and a maximum duty cycle of 100% output. A built-in loop compensation module reduces components in the system, lowering power system cost and reducing printed circuit board space.

The XL9508 has built-in TTL ON/OFF capability, thermal shutdown, current limit protection and output short protection function and so on.

Applications

- Buck constant current driver
- Monitor LED Backlighting
- General purpose LED lighting

Typical application schematic

Pin Configurations

Figure2. Pin Configuration of XL9508

Table 1 Pin Description

Pin Number	Pin Name	Description
1	CS	Output constant current sense Pin (CS). The CS reference voltage is 0.23V.
2	EN	Enable Pin. Drive EN pin high to turn off the device, drive it low to turn it on. Floating is default low.
3	VC	Internal Voltage Regulator Bypass Capacity. In typical system application, The VC pin connect a 1uF capacitor to VIN.
4	VIN	Supply Voltage Input Pin. XL9508 operates from 5V to 45V DC voltage. Bypass Vin to GND with a suitably large capacitor to eliminate noise on the input.
5,6	SW	Power Switch Output Pin (SW). Output is the switch node that supplies power to the output.
7,8	GND	Ground Pin.

Absolute Maximum Ratings (Note1)

Parameter	Symbol	Value	Unit
Input Voltage	V_{IN}	-0.3~50	V
EN Pin Voltage	V_{EN}	-0.3~7	V
Current Sense Pin Voltage	V_{CS}	-0.3~7	V
Output Switch Pin Voltage	V_{SW}	-0.3~ V_{IN}	V
VC Pin Voltage	V_C	-0.3~ V_{IN}	V
Power Dissipation	P_D	Internally limited	mW
Thermal Resistance (SOP8-EP) (Junction to Ambient, No Heatsink, Free Air)	R_{JA}	60	°C/W
Operating Junction Temperature	T_J	-40~150	°C
Storage Temperature	T_{STG}	-65~150	°C
Lead Temperature (Soldering, 10 sec)	T_{LEAD}	260	°C
ESD (HBM)		>6000	V

Note1: Stresses greater than those listed under Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
